

## Climate change support & resources map (July 2021 update)

### What is this for?

This document is an early version of a 'map' to signpost local authority Place Directors and their teams to sources of advice, support and other resources to help develop local strategies and action plans in response to Climate Emergency declarations. It provides a very brief overview of work by a range of national organisations, from within and outside the local government sector, to support local authorities on climate change work, providing links to relevant publications and tools. We intend to develop the document to make it more interactive, user-friendly, and dynamic – something that can be shared more widely, and perhaps updated directly by the organisations included below. If you have any suggestions as to how we might do this, please send them to Hannah Bartram [Hannah.Bartram@eastsussex.gov.uk](mailto:Hannah.Bartram@eastsussex.gov.uk) and David Dale [daviddale2401@gmail.com](mailto:daviddale2401@gmail.com) – we want your feedback!

For further information about what ADEPT is doing around climate change, please go to the [Climate Change Hub](#) on our website.

### What is included here?

For each of the organisations listed below we have drawn on publicly available information from their websites, and provided weblinks direct to the source. We have asked a series of questions about each one. Has the organisation:

1. Published a **policy statement** setting out its own position on climate change and/or policy asks of Government?
2. Prepared an **action plan** or workplan for its own future activities in relation to climate change?
3. Produced a **toolkit**, or does it provide **advice & support**, to help councils plan and implement climate change mitigation and adaptation actions in their local areas?
4. Published **case studies** of best practice by councils in tackling climate change locally?
5. Run practitioner **workshops** (either regional or thematic) to help councils tackle climate change?
6. Run a **conference**, or session at a conference, on climate change?
7. Provides advice and support to **businesses**, or has worked with corporate partners in the private sector on climate change?
8. Produced guidance for **parish and town councils**?
9. Commissioned or undertaken **research**, or analysed climate change data at a local level?

We know that the list of organisations, the questions asked, and the information shown will not be comprehensive – again, please send us your suggestions for what should be added.

## How is the information presented?

There is a summary table (below) showing the answers to the nine questions about what each organisation is providing in terms of support and resources for councils (shown as weblinks where possible). In the subsequent section there is a short description of each organisation and its climate change activities, with weblinks to key documents.
